Subject:	Bark Scaling Scanning Thickness FOP Technical Report FPI TR
Series Number:	Technical Report ; TR 2015 n.37
Language:	English
Abstract:	Forest companies across Canada are interested in using laser scanners for scaling logs because it has potential for reducing scaling costs. Scanning logs over bark requires a method to obtain the under-bark diameter in order to calculate the solid wood volume. This report evaluates the methods of applying a bark factor to determine under-bark diameter. It also identifies new scanner scaling technologies for measuring bark thickness.
